

CODY M. BROOKS — AI CONCEPT EXPLANATION

THE AI BEHIND THE MUSIC

Cody M. Brooks is a fully AI-generated country music artist — a digital outlaw born from code, but powered by real human heart.

At Wylde Chylde Records, we don't see AI as a replacement for artists — we see it as a revolutionary tool for next-level musical storytelling. While Cody's voice and musical performances are AI-generated, his lyrics and arrangements are crafted by our in-house human songwriters, drawing from deep wells of country tradition, emotion, and grit.

The mixing and final mastering of *Whiskey, Women & Wild Rides* were handled by our in-house human studio engineer, bringing a warm, professional polish to every track. On the visual side, many of the photographs featured in Cody's music videos were captured by our staff using traditional photography, blending real-world texture with AI-generated imagery.

Before a single frame of video is created, our human creative team leads all brainstorming and storyboarding, shaping the visual storytelling, emotional beats, and pacing to ensure each scene reflects the song's spirit and message.

Cody M. Brooks represents the next chapter in music — where human creativity and AI innovation walk side by side, pushing boundaries without losing soul. This isn't about replacing humans — it's about amplifying creativity and blowing open the doors of what's possible.
